HAVENTEC

AUTHENTICATE

Single-step Passwordless MFA

Winner of the 2021 Australian Technologies Competition
and InnovationAus awards for cybersecurity.

Safe. Simple. Secure.

In a world beset by data breaches, the traditional password is leaving your organisation and customers vulnerable to exploitation.

Only Haventec Authenticate provides a genuinely passwordless technology that completely eliminates passwords, shared secrets and friction.

By reimagining authentication – from a central record of passwords to a decentralised identity and a genuinely private secret – enterprises can rethink how they build trust with their customers.

Build secure experiences at scale

With Haventec Authenticate, your users will enjoy exceptionally secure yet beautifully simple user authentication across web and mobile applications.

Our solutions include:

- **Passwordless customer authentication**
  Enable powerful customer authentication on any device. Enhance security and fast-track the adoption of MFA across your customer base by leveraging our internationally patented single-step MFA technology.

- **Passwordless employee authentication**
  Add passwordless authentication capability to your existing identity infrastructure and make the most of your current investment. Haventec Authenticate integrates with solutions from OKTA, Ping, Auth0 and Microsoft.

- **Passwordless SSO for enterprise applications**
  Take back control of your IT perimeter and enterprise applications. Haventec Authenticate's intuitive admin portal supports rapid on-boarding of applications and provides your users with a unified, consistent and secure access experience.

Award winning innovation
HAVENTEC

Haventec Authenticate is different

Authenticate breaks access to your identity into multiple parts, separating them across multiple locations. Two sets of keys are changed and re-encrypted for every Authenticate transaction.

When using Authenticate to access a digital service, the user simply enters a secret [this secret is never stored anywhere]. Authenticate eliminates operational risk as it does not require a central credentials store to be maintained, unlike other "password-free" offers in the market that simply substitute a password for another factor, but continue to store the password centrally.

Benefits to your business:

- Leverage multi-factor protection without multi-factor friction
- Ensure speed to market whilst delivering superior authentication experience
- Decentralise storage of digital identities to enhance privacy and minimise risk
- Move beyond brittle and costly password-based authentication
- Mitigate against credential stuffing, phishing and social engineering
- Add passwordless MFA to legacy systems and existing identity infrastructure
- Enable a single pane of glass for managing users and enterprise applications
- Satisfy MFA requirements for compliance mandates

✓ Adaptive, single-step MFA technology   ✓ Cryptographically validated   ✓ Internationally patented   ✓ Decentralised security

HAVENTEC

About Haventec

Our mission is to enable organisations and individuals to thrive in an era of remarkable connectivity. That's why we provide platforms that ensure trust and delight are at the heart of your application.

We have developed award winning decentralised platforms that eliminate the need to centrally store digital identities, credentials and data. For organisations, consumers and citizens, it's time to grow your business, innovate and transact online with confidence.
